Pengambilan Data pada Kaggle API

The screenshot displays a Jupyter Notebook environment. On the left, a file explorer shows a directory structure with a folder named 'sample_data' containing several CSV files related to football leagues and a 'kaggle.json' file. The main area of the notebook shows two code cells. The first cell, labeled '[1]', contains commands to install Kaggle, create a local directory, copy the 'kaggle.json' file, and set permissions. The output of this cell lists various system requirements that are already satisfied. The second cell, labeled '[2]', contains a command to download a specific dataset from Kaggle. The output shows the progress of the download, reaching 100% at 174k. A third cell, partially visible, shows the command to unzip the downloaded file.

```
[1] ! pip install kaggle
    ! mkdir ~/.kaggle
    ! cp kaggle.json ~/.kaggle/
    ! chmod 600 ~/.kaggle/kaggle.json
